M. WOOD & SONS.

Greetings to Our Friends and Customers

At the beginning of this season we are handicapped very much due to one of the worse droughts we have ever experienced and our plant crop is the shortest in history, but we are coming to you with the best plants that can be grown under these conditions.

We have been growing and shipping plants for over 35 years and each year we try to make our plants better. Our plants will be good strong plants and we guarantee them to be of good quality and nothing but select plants.

We are pricing our plants just as cheap as we possibly can to give you the very best plant grown. We know that our business depends on the merit of our product. Nothing is more appreciable to us than to please our customers. We value your friendship more than our money.

Guarantee

We guarantee our plants to be double inspected and free from all disease, true to name, strong in vitality, to produce good crops under normal conditions.

Although sometimes the weather, soil and the method of cultivation have some control over the production, under no circumstances shall M. Wood & Sons be held liable for more than the purchase price.

Description of Varieties

BLAKEMORE:—

The Blakemore has been grown in about every strawberry growing state in the union. It is highly praised by everyone who has grown it due to its heavy fruiting, plant making and disease resistance. It is a cross between the Premier and Missionary, and is a product of the U. S. Department of Agriculture. The color is bright red and it is very firm. We have fruited this berry, and we recommend it as the best home or commercial berry to grow. We have the pure strain. You will find none better than WOOD'S.

MISSIONARY:—

This variety does not need very much introduction as it is grown for commercial use in every section of the country. Florida plants this variety and it is a fav-

orite in Texas and along the Gulf Coast. It is one of the best on the market — dark red and of medium size — and one of the best shippers. You will find nothing superior to our selected Missionary plants.

KLONDYKE:—

The Klondyke has never been excelled by any of the newly brought out varieties. It knows no superior, and has been planted in large quantities for commercial purposes for years. It is a large, bright red berry, which is very firm. The Klondyke will hold its color for days after picking. WOOD'S have the pure strain of the Improved Klondyke.

KLONMORE:—

This variety comes from Louisiana where the growers have been growing it for the past eight years, and many of them have discarded all other varieties claiming Klonmore is superior to Blakemore and Klondyke. Many of these plants are being grown here, with very satisfactory results. The Klonmore is a cross between Klondyke and Blakemore. It is a good shipper, disease resistant and a high yielder as well. This berry has a good taste, flavor and rich coloring.

BELLMAR:—

It is a scientific cross between the Premier and Missionary. The Bellmar is one of the best berries on the market and one of the heaviest fruiterers. They are very firm, and will hold up a long time after they are put in a box. The berry is bright, glossy red with green caps. It is a wonderful berry for home or commercial use.

MARION BELL:—

This is one of Louisiana's latest introductions and the report from Louisiana growers seem to think that it will take a place along with the Klondyke and Klonmore.

ROBINSON:—

The Robinson berries are a bright red color and firm, the leaves are green and healthy and a very good plant maker. Lots of Robinson are grown in Michigan and Illinois and are given favorable comment from both places.

GEM EVERBEARING:—

Gem is one of the largest everbearing strawberries. It has large green caps — is attractive in size and color, and brings top prices in the fall markets. The Gem leads all other everbearing berries because it has all the worthwhile qualities of the others in a large berry. It is fairly firm and has a beautiful color.

STREAMLINER:—

The Streamliner is extremely large, round in shape, and red in color. They are a very sweet berry and very firm and will stand up good.
